

Legacy Healthcare to Present RAAINBOW Phase 2/3 Clinical Trial Data at Spanish Academy of Dermatology and Venereology Congress

Epalinges, Switzerland, 15 April 2024 - - Legacy Healthcare, a Swiss-based biotechnology company developing first-in-class botanical drugs for human health, today announced that it will present phase 2/3 data from its RAAINBOW trial at the 23rd annual congress of the European Society for Pediatric Dermatology (AEDV) taking place in Madrid from 2-4 May, 2024.

“Alopecia areata remains a vastly unserved market, particularly for pediatric patients for which there is significant room for innovation,” commented Saad Harti, Chairman & CEO of Legacy Healthcare. “Data from our RAAINBOW study with CINAINU, our first botanical drug, show significant promise and we are dedicated to advancing this and submitting for approval from regulatory authorities around the world to advance patient care.”

Data from the RAAINBOW study was presented by Sergio Vañó Galván, MD, Director of the Hair Disorders Unit of Ramon y Cajal University Hospital and the Hair Disorders and Hair Transplant Unit the Pedro Jaén Group Clinic in Madrid and Associate Professor of Dermatology at the University of Alcalá. The AEDV Congress is a premier event in the field of dermatology, bringing together academics, practitioners, and healthcare professionals to discuss advancements in skin health and related diseases. Topics range from innovative treatments for autoimmune skin conditions, such as alopecia areata, to cutting-edge research in psoriasis, atopic dermatitis, and skin cancer therapies.

About Phase 2/3 RAAINBOW trial

This randomized, placebo-controlled, double-blind study investigated Coacillium in patients from 2 to 18 years of age with alopecia areata. Patients included had moderate alopecia areata (SALT 25-50) and severe alopecia areata (SALT 50-95), and were experiencing a current episode of alopecia areata that had lasted between six months and three years (n=62). Patients were randomized to receive topical Coacillium or placebo (2:1). A treatment period of 6 months was followed by a treatment-free period of 6 months, to evaluate possible disease recurrence in successfully treated patients. The primary endpoint was the relative change in scalp alopecia areata severity score (SALT) from baseline value to be assessed after 24 weeks of treatment, evaluated through global standardised scalp photographs. A key secondary endpoint was the proportion of the responders, i.e. subjects achieving at least a 40% relative reduction in SALT score from baseline at the end of 24 weeks' treatment period. SALT is the standard tool for measurement of the amount of scalp hair loss in alopecia areata.

About Legacy Healthcare

Legacy Healthcare is a Swiss-based biopharmaceutical company focused on leveraging the pleiotropic activity and strong safety profile of plants to develop prescription botanical drugs that address serious medical conditions. The company's first product candidate, CINAINU, has demonstrated strong safety and efficacy in a phase 2/3 study involving patients suffering from alopecia areata, a chronic autoimmune condition with highly damaging psycho-social issues that impact all who suffer from it, especially children.
